

How to connect to VPN with L2TP at Windows 7

○ L2TP connection at Windows 7

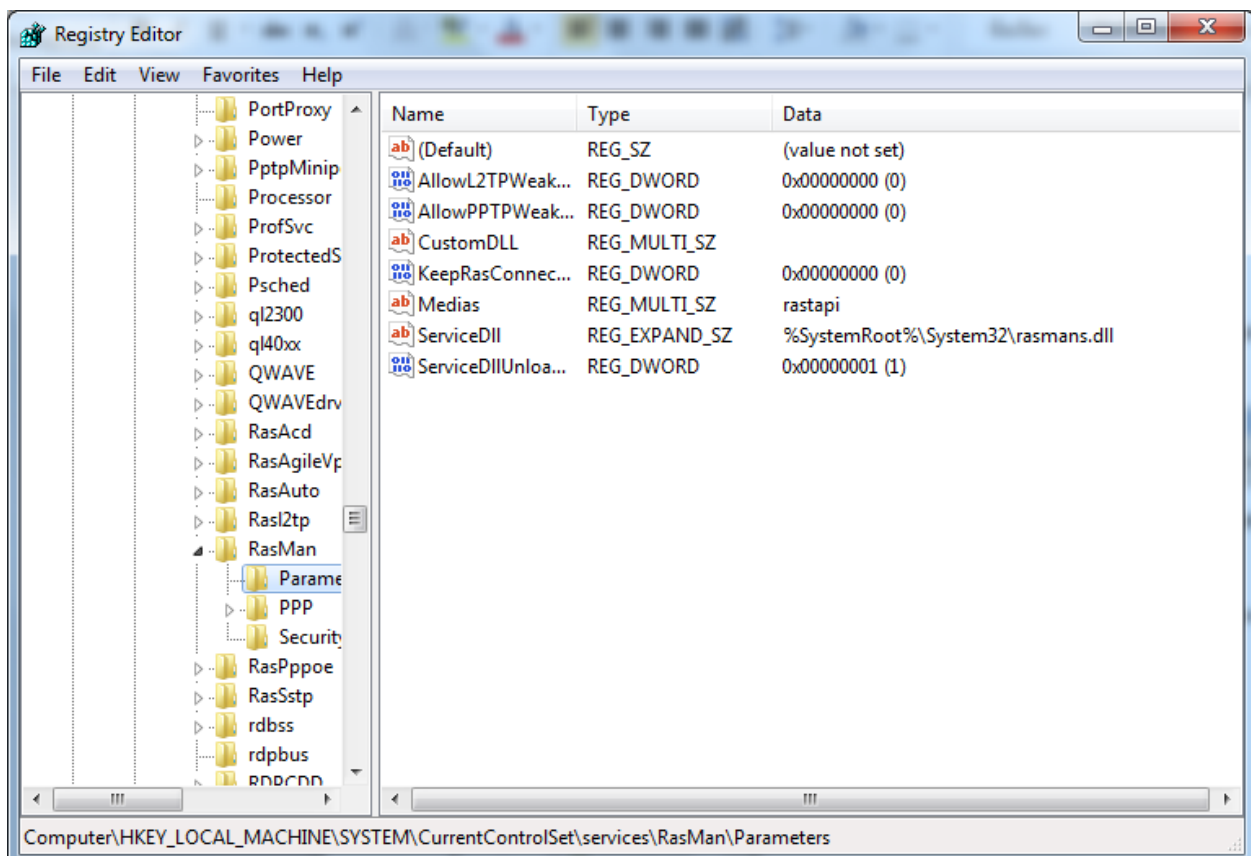

L2TP is installed automatically at Windows 7. But user has to add to registry so that user uses only L2TP because Windows use L2TP/IPSec in default.

1. Click Start -> Run. Type 'regedit' and then click 'OK' like [picture 1].

[picture 1]

2. Move to 'HKEY_LOCAL_MACHINE\System\CurrentControlSet\Services\Rasman\Parameters' at Registry Editor. You can see [picture 2].

[picture 2]

3. Add Registry Value for below KEY.

Value Name : ProhibitIpSec

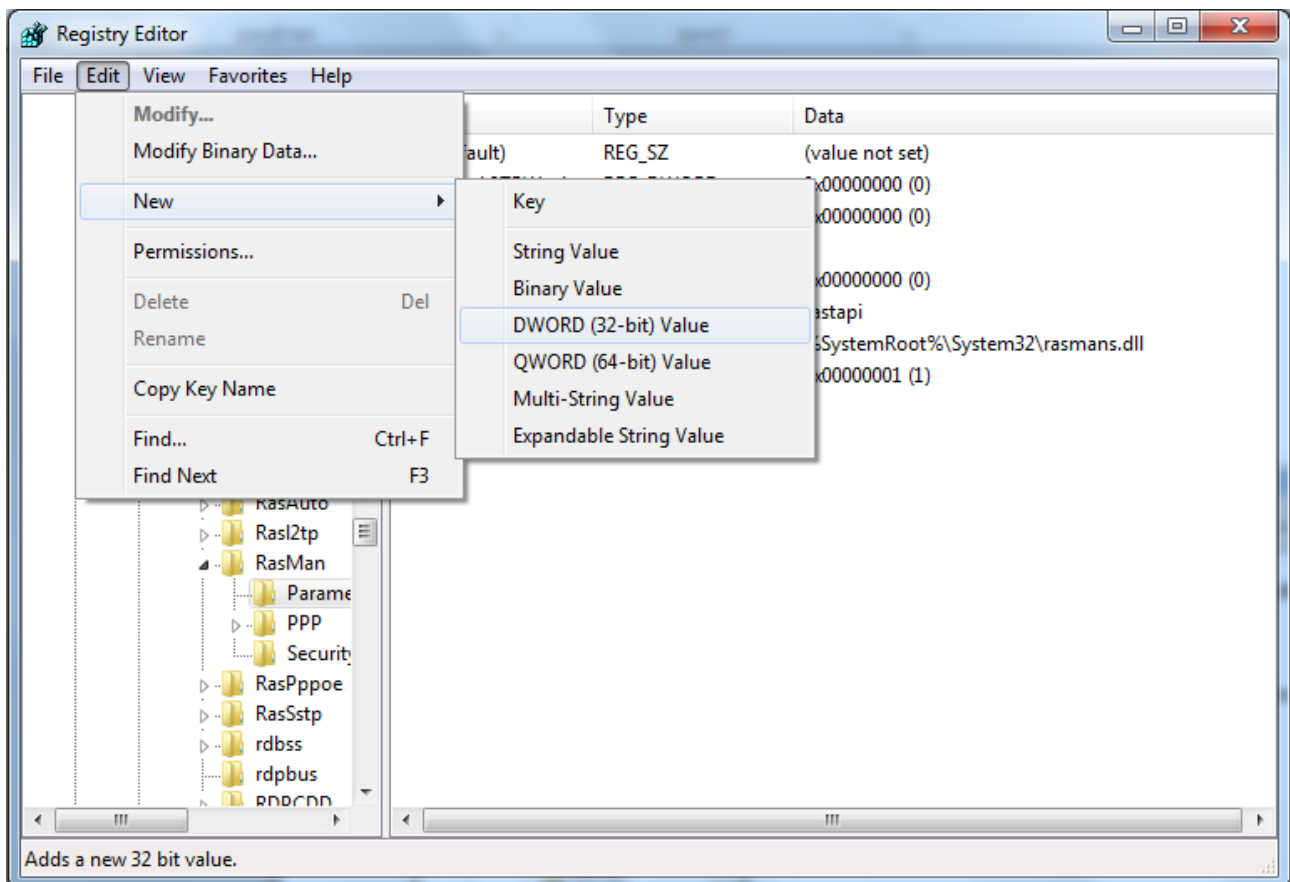

Data Type : REG_DWORD

Value : 1

3.1 Click Edit -> New -> DWORD Value like [picture 3].

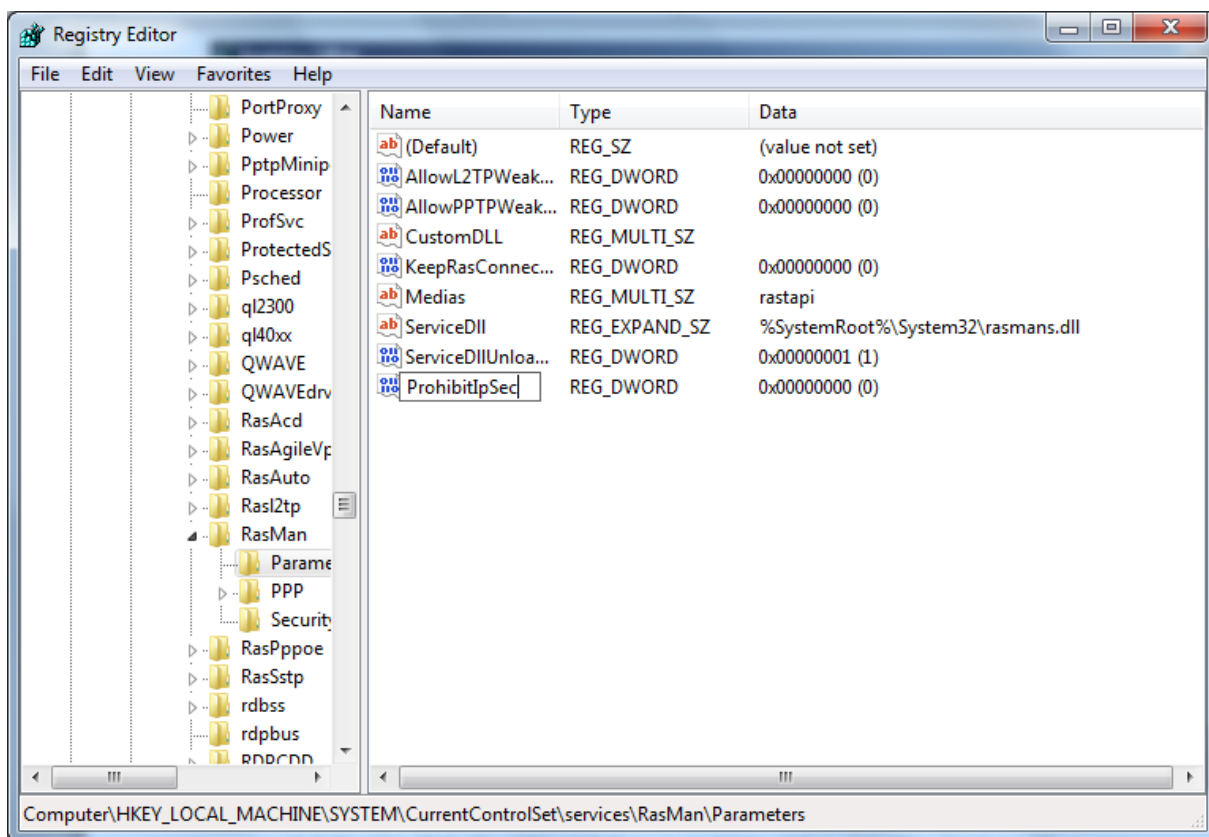

If your PC is 32-bit machine, you have to click DWORD (32-bit) Value

And if your PC is 64-bit machine, you have to click QWORD (64-bit) Value.

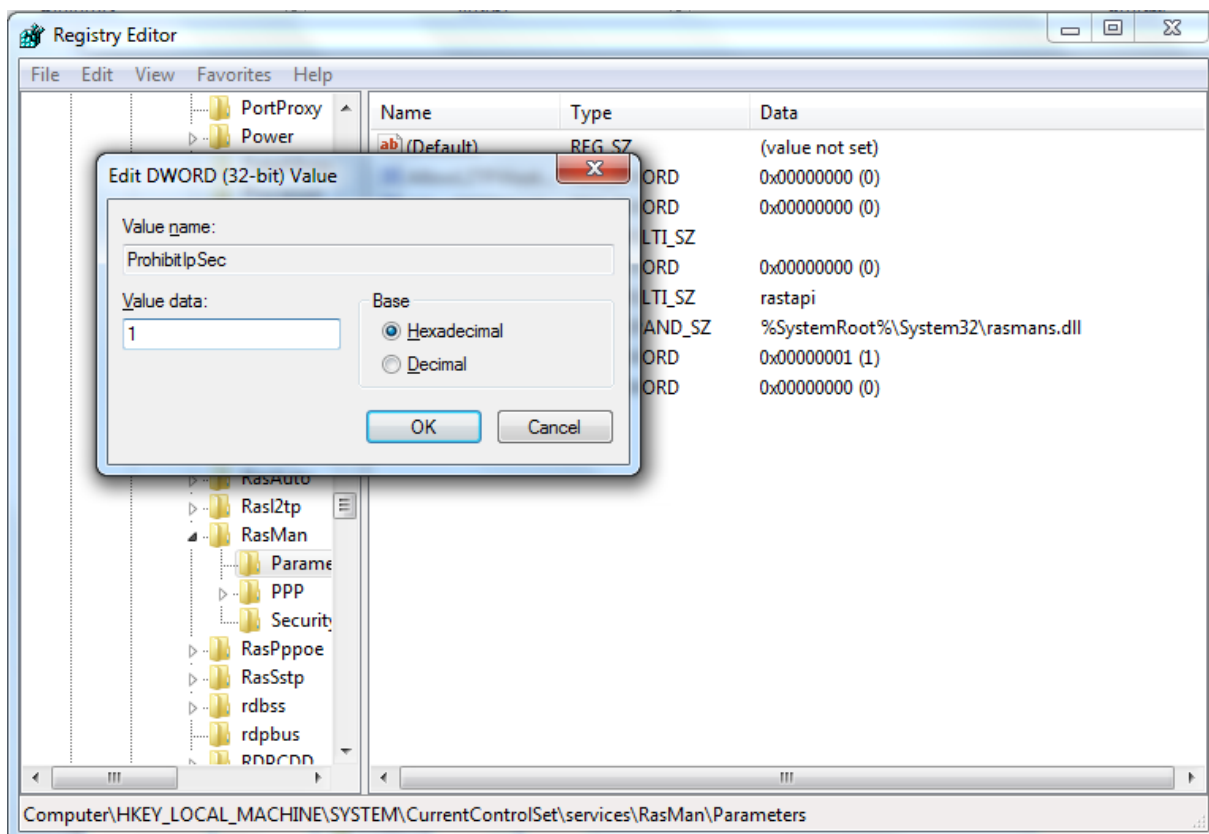

[picture 3]

3.2 Type 'ProhibitIpSec' to Value name like [picture 4].

[picture 4]

3.3 Double Click the KEY and then type '1' to Value data like [picture 5].

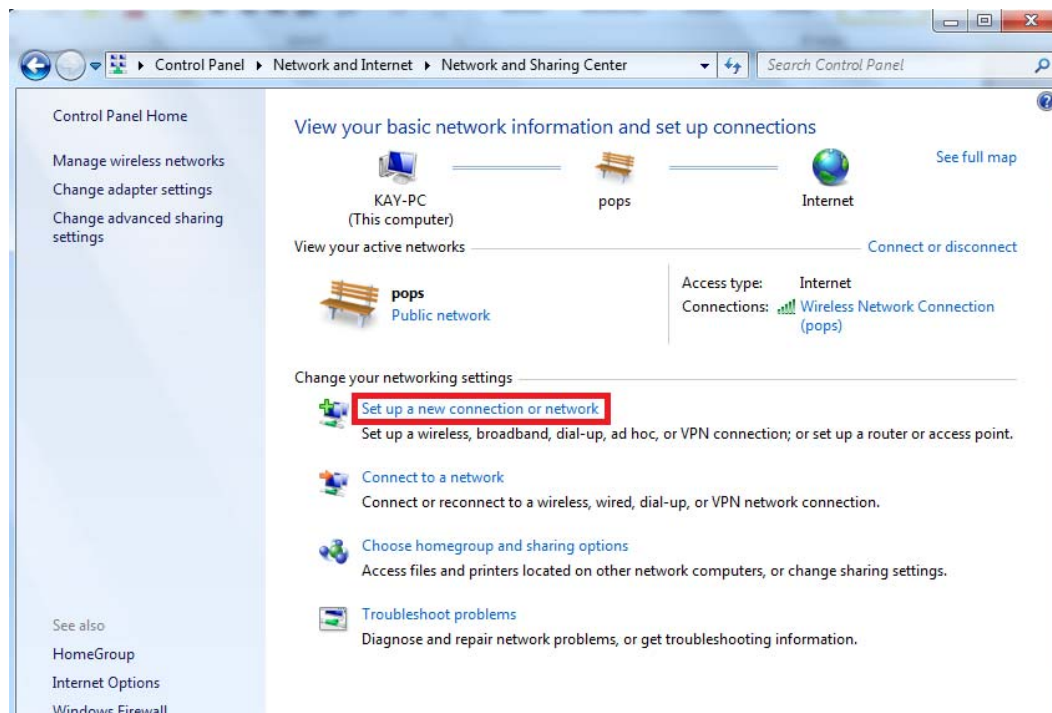

[picture 5]

4. You have to restart your computer to use this KEY.

○ How to make VPN connection with L2TP at Windows

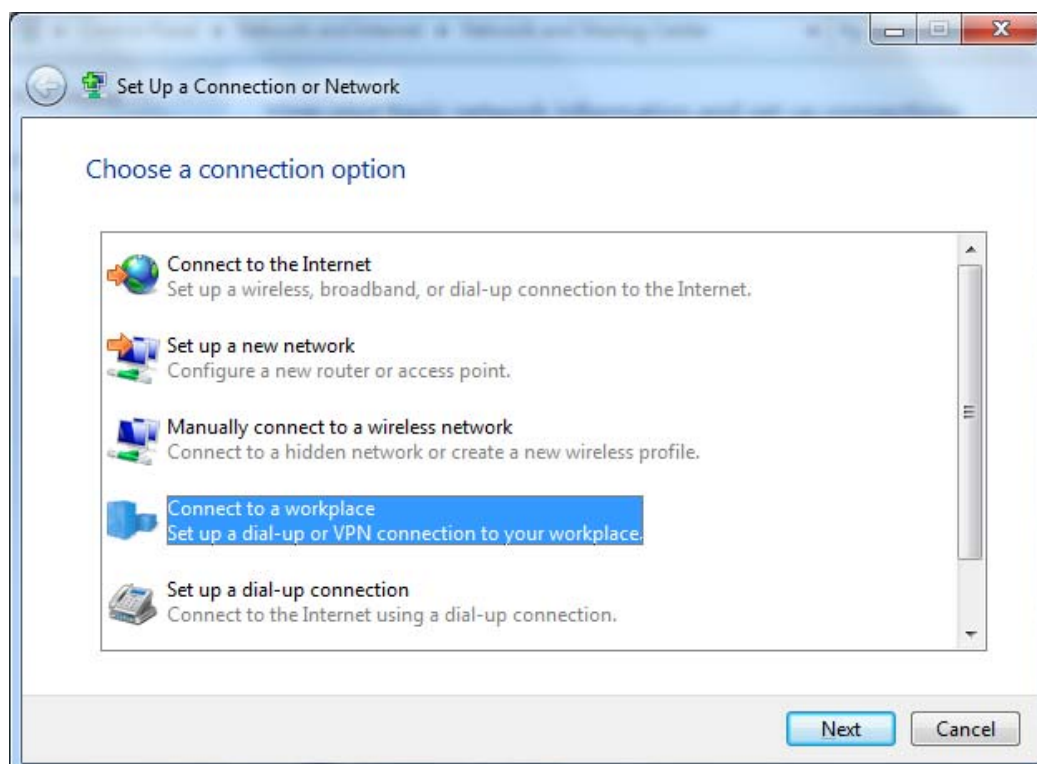

1. Open 'Network and Sharing Center' at Control Panel. You can see [picture 6].

[picture 6]

2. Click 'Set up a new connection or network' on the below. It is the red box at [picture 6].

3. You can see [picture 7]. Select "Connect to a workplace" and click "Next" button.

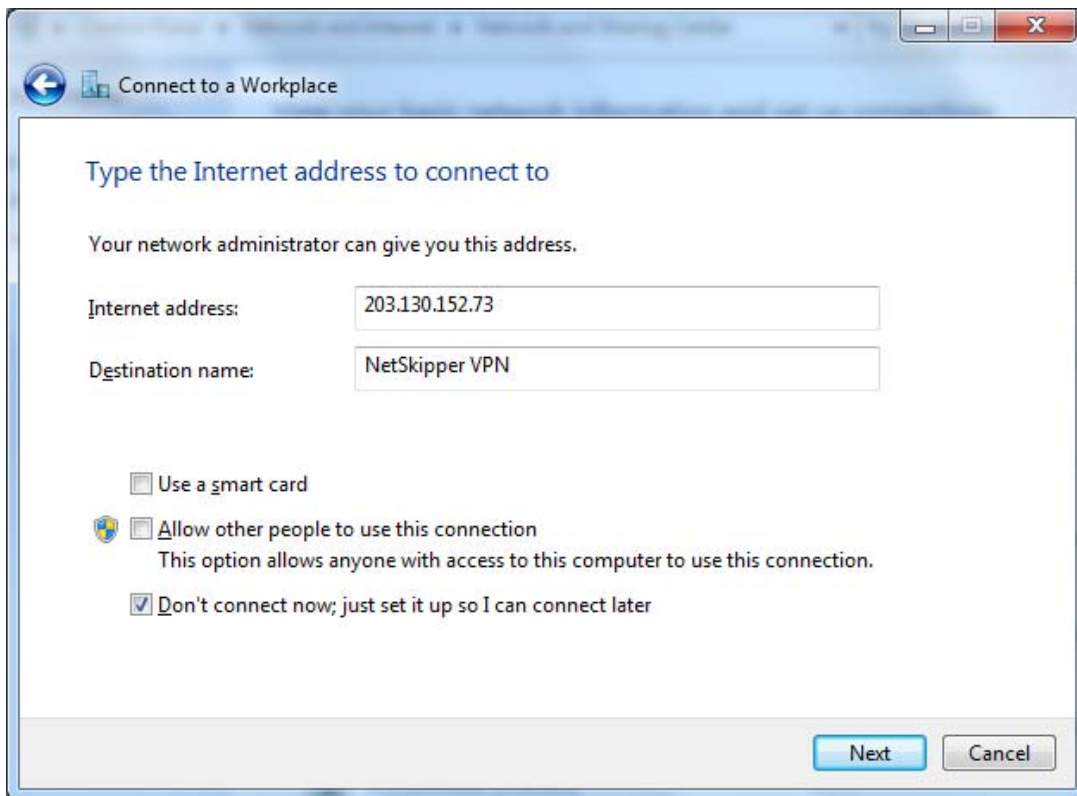

[picture 7]

3. You can see [picture 8]. Click “Use my Internet connection (VPN)”.

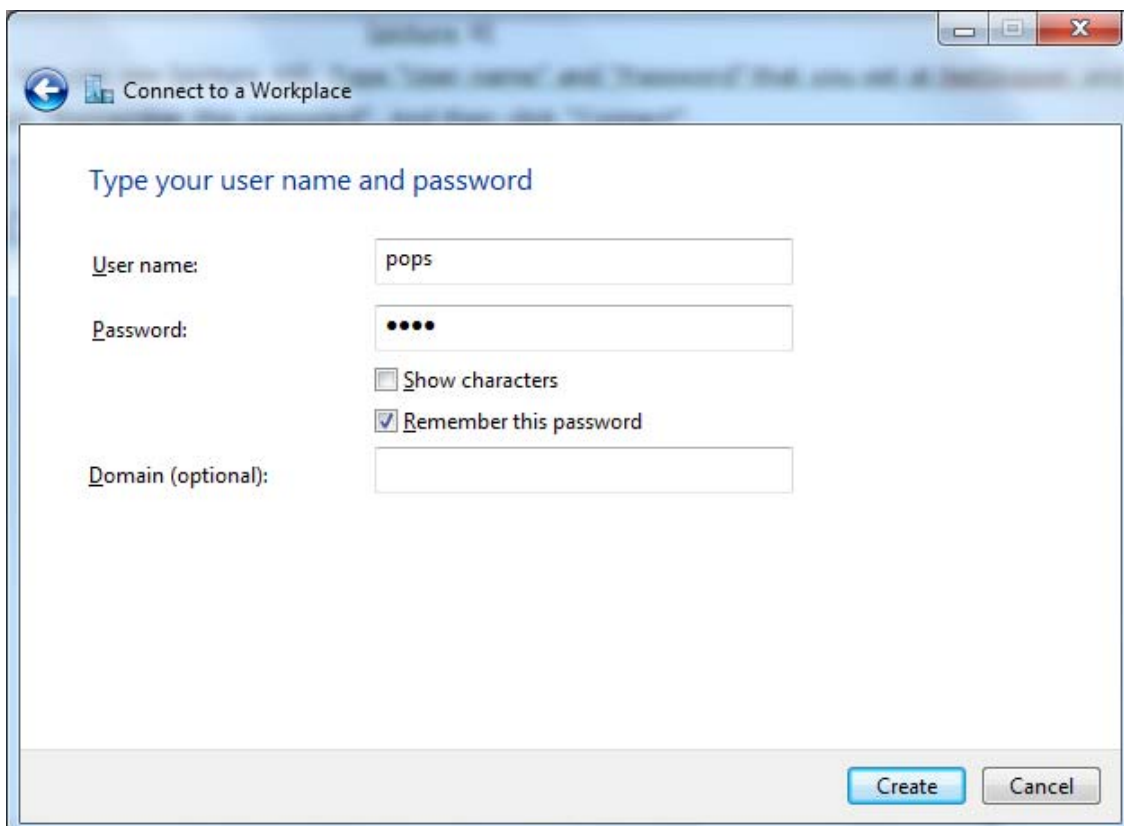

[picture 8]

4. You can see [picture 9]. Type in Public IP address of NetSkipper at Internet Address and type in VPN name at Destination name and click “Don’t connect now; just set it up so I can connect later” like [picture 9]. And then click “Next”.

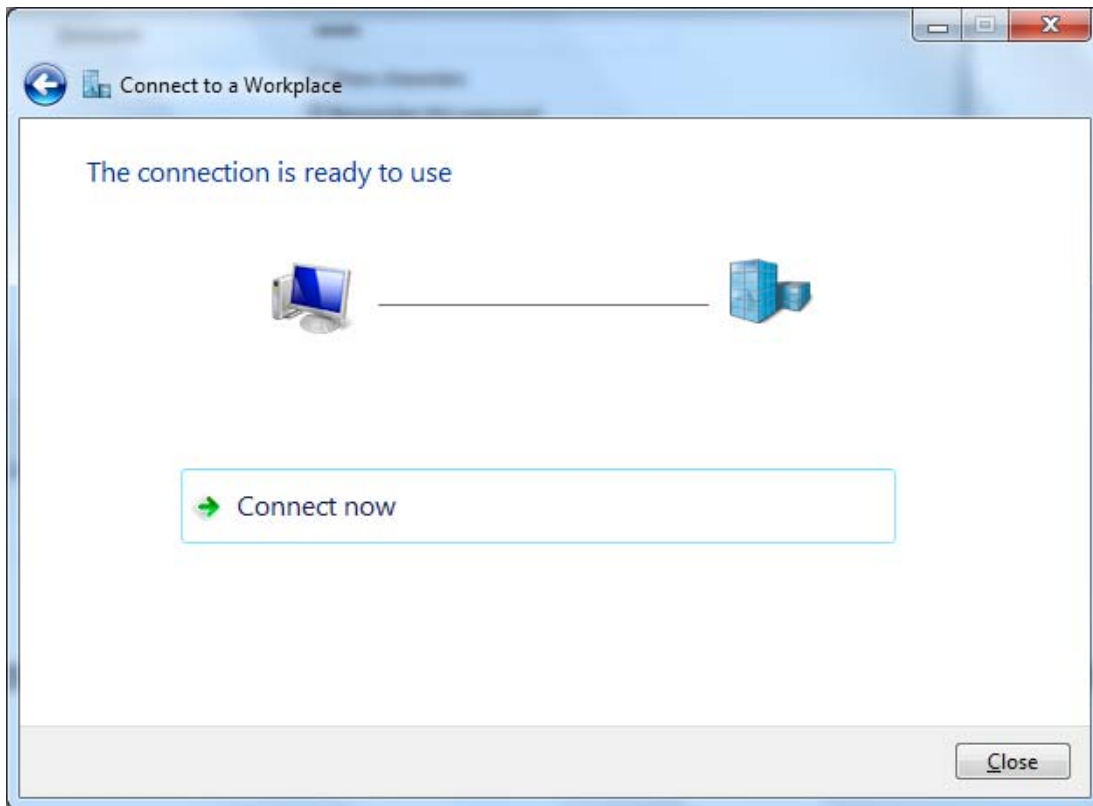

[picture 9]

5. You can see [picture 10]. Type "User name" and "Password" that you set at NetSkipper and click "Remember this password". And then click "Create".

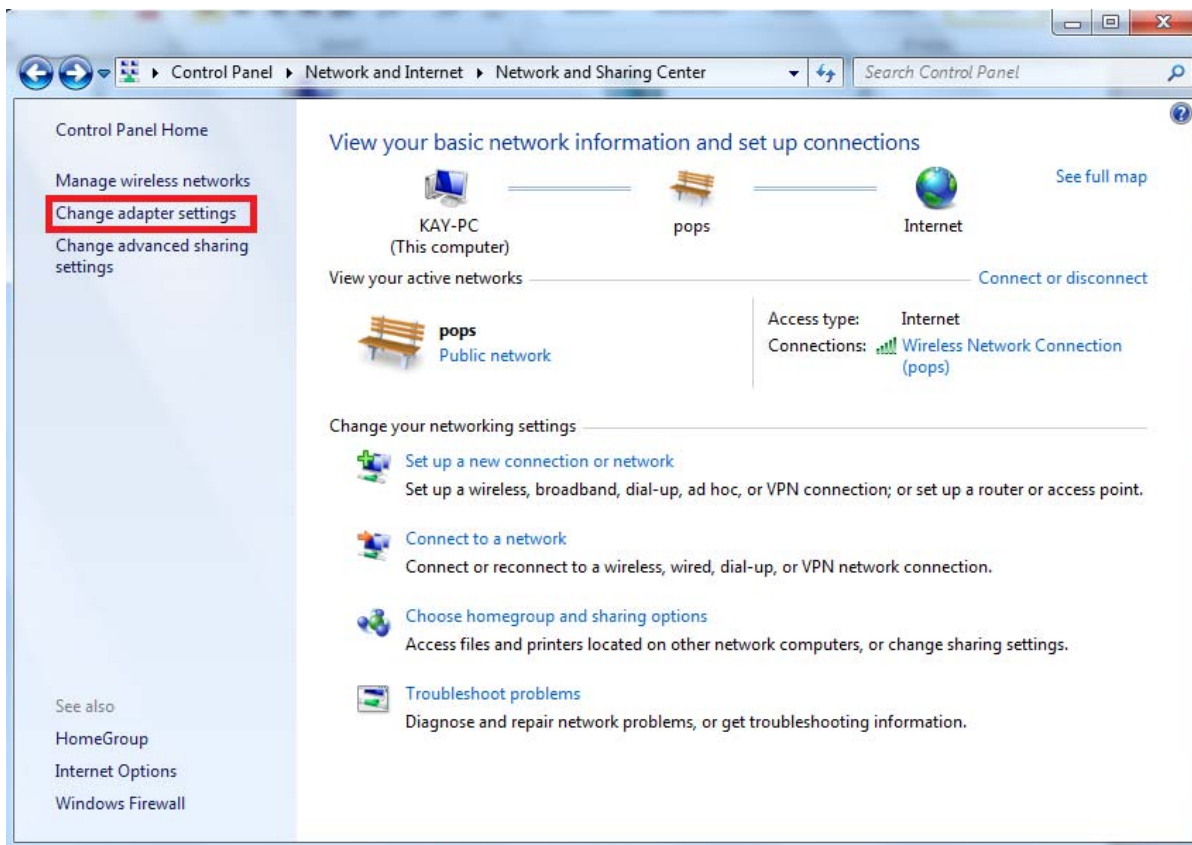

[picture 10]
